ROAD SWEEPERS

Tractor Front-Mounted Road Sweeper

About the product

With our factory in Afyon and our 27 employees, we serve farmers in Türkiye and abroad. We are one of Türkiye's largest manufacturers. We have been manufacturing agricultural machinery for 33 years. With years of experience in agricultural machinery, we serve farmers in Türkiye and, through our exports to more than 11 countries, around the world, and our road sweepers meet everyone's needs. Our road sweepers are robust and durable and suitable for all surfaces.

Road sweepers with a water spray system can also be used for spraying. Sweepers with a collection bucket gather what the cylindrical brush sweeps up into the bucket and can empty it wherever required. The side brush on the road sweeper sweeps corners and edges that the cylindrical brush cannot reach and pushes the debris in front of the cylindrical brush. A road sweeper makes cleaning any kind of surface easy.
