WATER AND FUEL TANKERS

Fire-Fighting and Irrigation Tanker

About the product

Founded in 1984 as a family business in a small workshop, SAYGINLAR began with the production of tractor cabs and trailers. Today it continues its activities by manufacturing nearly thirty types of products and by trading hundreds of products from the brands it represents.

Our company manufactures at its factory in the Afyonkarahisar Organised Industrial Zone, which has 3,000 m² of covered and 2,000 m² of open space, and sells through its store in Afyonkarahisar city centre. Most of our sales are domestic, thanks to our extensive dealer and service network, but we also export to countries such as Kuwait, Azerbaijan and Iran.

Our water tanker range comes in 3 types: water tanker trailers, fuel tankers, and stationary water and fuel tanks. You can choose the model with axles and use the water tanker as a mobile unit, or use it as a stationary tank. The tank can be used to store water, fuel, oil and chemicals. You can meet your water and diesel needs in any terrain and carry water and fuel from one place to another. Water tanker models range from 2 tonnes to 8 tonnes.

Road sweepers with a water spray system can also be used for spraying. Sweepers with a collection bucket gather what the cylindrical brush sweeps up into the bucket and can empty it wherever required. The side brush on the road sweeper sweeps corners and edges that the cylindrical brush cannot reach and pushes the debris in front of the cylindrical brush. A road sweeper makes cleaning any kind of surface easy.

- 2 mm galvanised tank
- 100 NPU chassis

- Hand-washing tank
- Equipment box
- 4 mm swivel drawbar
