WATER AND FUEL TANKERS

Fuel Tanker

About the product

Founded in 1984 as a family business in a small workshop, SAYGINLAR began with the production of tractor cabs and trailers. Today it continues its activities by manufacturing nearly thirty types of products and by trading hundreds of products from the brands it represents.

Our company manufactures at its factory in the Afyonkarahisar Organised Industrial Zone, which has 3,000 m² of covered and 2,000 m² of open space, and sells through its store in Afyonkarahisar city centre. Most of our sales are domestic, thanks to our extensive dealer and service network, but we also export to countries such as Kuwait, Azerbaijan and Iran.

Our water tanker range comes in 3 types: water tanker trailers, fuel tankers, and stationary water and fuel tanks. You can choose the model with axles and use the water tanker as a mobile unit, or use it as a stationary tank. The tank can be used to store water, fuel, oil and chemicals. You can meet your water and diesel needs in any terrain and carry water and fuel from one place to another. Water tanker models range from 2 tonnes to 8 tonnes.

- Tank sizes: 2000 L, 2500 L, 3000 L, 5000 L and 8000 L
- 2 mm galvanised tank
- 100 NPU chassis
- Hand-washing tank
