ROAD SWEEPERS

Hidromek-Mounted Road Sweeper

About the product

This product can be mounted on a Hidromek machine. It is used to clean roads, barns, farms, brick factories and all kinds of other areas. Its brushes are driven by hydraulic motors.

Thanks to its sturdy plastic brushes, it can sweep up even hard and sticky material such as manure. The optional side broom has steel bristles and is good for cleaning corners along walls and kerbs.

The optional water spray system keeps down dust while sweeping, and if disinfectant chemicals are added to the water tank it can also be used for disinfection. For example, because it has a powerful water pump, waste bins can be washed and disinfected using the sweeper’s spray system.

- Angle adjustable to the left and right
- High-quality, abrasion-resistant plastic brush
- 2 rear wheels
- Optional extras: hydraulic emptying system
- Side brush with hydraulic motor
- Water spray system with hydraulic motor
- Spraying equipment
- Steel brush
